## INTRODUCTION

# SCALABS

The conventional way of conceiving, designing, and executing designs has been changed with physical and digital technologies.

Moreso, the advent of emerging tech like Blockchain is changing narratives across all industry including manufacturing and 3D printing.

SCALABS aims to fit into the epicenter of this revolution by fusing NFT and 3D printing together to create NFTc – a unique set of physical items that combines both physical and digital designs.

## SCALABS PLATFORM

### Enhanced by blockchain technology

Providing large scale 3D printing manufacture and connecting content creators with customers.

## NFTc – SFTc PRODUCTS

### A lifetime guarantee product

Designing exclusive premium phygital assets to elevate traditional consumption to a new, more modern, and inclusive standard (NFC technologies).

## UTILITY TOKEN

### Powered by the blockchain

Will power SCALABS' in-experience economy by creating sustainable engagement value for consumers and enabling its participants to capture the value created.

## DESIGN TO EARN

### A new way to earn tokens

Design competitions will be organized, and teams and the community will be able to vote on entries to introduce unique and exceptional ranges of NFTc and SFTc.

## REWARD PROGRAM

### Enhanced by blockchain technology

Offer fair rewards to each stakeholder to allow the company to scale up quickly.

## NFT MARKET

# Insights

### What is an NFT?

An NFT is a unique digital assets that cannot be copied, substituted, or subdivided. It is recorded in a blockchain and used to certify authenticity and ownership.

This asset is traceable and leads to exclusive royalties and benefits for the owner. Interestingly, the 3D printing niche of the NFT industry has not been explored.

**2 574 302**

Number of NFT users in the world

**28.6 million**

Wallets traded NFTs in 2021

**21 350%**

Market growth in 2021

**+ \$176 billion**

NFT market growth forecast to 2026

# Problems to solve

WHAT ARE THE NEEDS OF WEB3 BRAND?

# Identified issues

## Community

To succeed in capturing the attention of over-solicited Internet users on social networks in order to build a trust relationship with them.

## User Experiences

Deliver an exclusive community experience with the objective of building user loyalty while improving the e-reputation and perceived image of the project.

## Value

Increase the value tangibility of NFTs collections by creating a strong added value for the consumer while differentiating from the competition.

WHAT WE DO ?

# Our Vision

Our long term objective is to become leader in additive manufacturing and NFTs phygitalization.

- We aim to transform the way society consumes by elegantly combining 3D printing and blockchain to form a new generation of phygital assets which combines both physical and digital.
- We also envision developing strategic innovative activities that will disrupt 3D printing research and development as well as its commercial activities and product sales.

NFTC

# Scalabs' Innovation - NFTc

The realization of NFTc is a world premiere. Plus, a large-scale production is already possible.

NFTC

# Scalabs Commercial Offer

## What we Offer

Our realizations can take various forms and finishes : statues, figurines, cards, jewels, masks, elements of decoration or entertainment. These products have many use cases in different ecosystems: from Play-to-Earn to Metaverse through the fields of Art, Sports or Brands.

Commercial Events,  
Promotional Items,  
Goodies.

Pre-existing NFTc collection,  
Collab NFTc collection,  
Customized NFTc.

WHAT WE CAN PRODUCE?

# Materials and finishes

Metal, Anodizing, Handmade Paint, Textured Surfaces, Transparent, Crystal Resin, Biosourced Polymers...

NFTC

# Products Examples

Statue, street art, game asset, decorative element...

 Made in France

# Scalable Factory

## Scalable production capacity :

- 10,000 NFTc will be quarterly manufactured for the first year
- 10 000 NFTc monthly produced is our objective

## Management of the recycling chain :

- More than 10 biosourced materials (corn starch, coconut shell, orange peel, etc.)
- Recycling of broken or defective products, lifetime guaranteed

# What our Web3 Platform offers

First-ever fully immersive experiential store that allow users to purchase 3D printed NFTs with token.

Interactive user interface and dashboard that allow users exclusive interaction with their NFTc and it different benefits.

A live NFTc auction room where users can bid on exclusive items.

# Tokenomics

# Design-to-Earn

## Introducing a new way to earn tokens

We aim to redefine the way society consumes and the objective behind this is to set up a global pool of creators where members can provide a strong capacity of innovation. We will ensure the means to put their ideas and creativity into production is actualized.

To achieve this, we will create design challenges and competitions to allow these creators and designers propose new, innovative, and creative items based on themes and specifications set out by our team.

After checking the applications to ensure the viability of their production, the community will be able to vote to elect the winners who will see their works offered on our marketplace.

01

Sort through entries to ensure the viability of their production

02

Community vote for exclusive collections

03

Collections will be 3D printed and offered on our platform

04

A percentage of sales proceeds will be given to the creator

SCALABS ARCHITECTURE

# Real Estate

## 1. 3D printing

3D printed homes and properties are no doubt the future of real estate. It comparatively lowers the cost of construction, help create unique and customized home designs that exceeds mundane floor plans and usual theories. The environmental impact is also lower than traditional construction which makes it worthy of implementing.

## 2. Tokenization

Tokenization brings about value in both tangible and intangible assets. With tokenization, real digital real estate ownership will be facilitated, transparency will be ensured and lack of trust will be removed. Ownership of part of full real estates will be enshrined and converted into NFTs to develop new modes of large-scale investment.

## 3. Utility

SCALABS will drive more utility and value with this innovative solution. We will be able to actualize majority of the buildings of these digital assets and a percentage of the real estate income will be given to the holders. We will also offer staking solutions to drive inclusion.

# Roadmap

2018 – 2021

## Concept Set Up

- Genesis of the Concept and Main Goals
- Research & Development and Proof of Concept
- Ecosystem Design and Business Model

2021 – 2024

## Public Launch

- Core Team Building and Tokenomics
- Go to Market Strategy and Compliance
- Community Building and Key Partnership

2024 – 2027

## Growth

- Web App Released and Token Sales
- Immersive Marketplace and Design-to-Earn
- Product Line Development and 3D Printed Architecture

ABOUT

# Core team

Wahab Oukouchih  
Technical Execution

Operational Management    Development

Mechatronics    Industrialization

With a degree in mechatronics, I have been an R&D project manager and manufacturing manager for 6 years, also president of an association that has been organizing cultural events for 4 years.

Alexandre Giroto  
CEO

Additive Manufacturing    Digital Assets

Design    Web3    Prototyping

Founder and CEO of SCALABS, a 3D printed company enhanced by the Blockchain Ecosystem. Special interest in prototyping, web3 and entrepreneurship. Previously industrial and professional equipment designer. Master degree in marketing.

Anthony Tordjman  
Business Visionary

Strategy Marketing    Communication

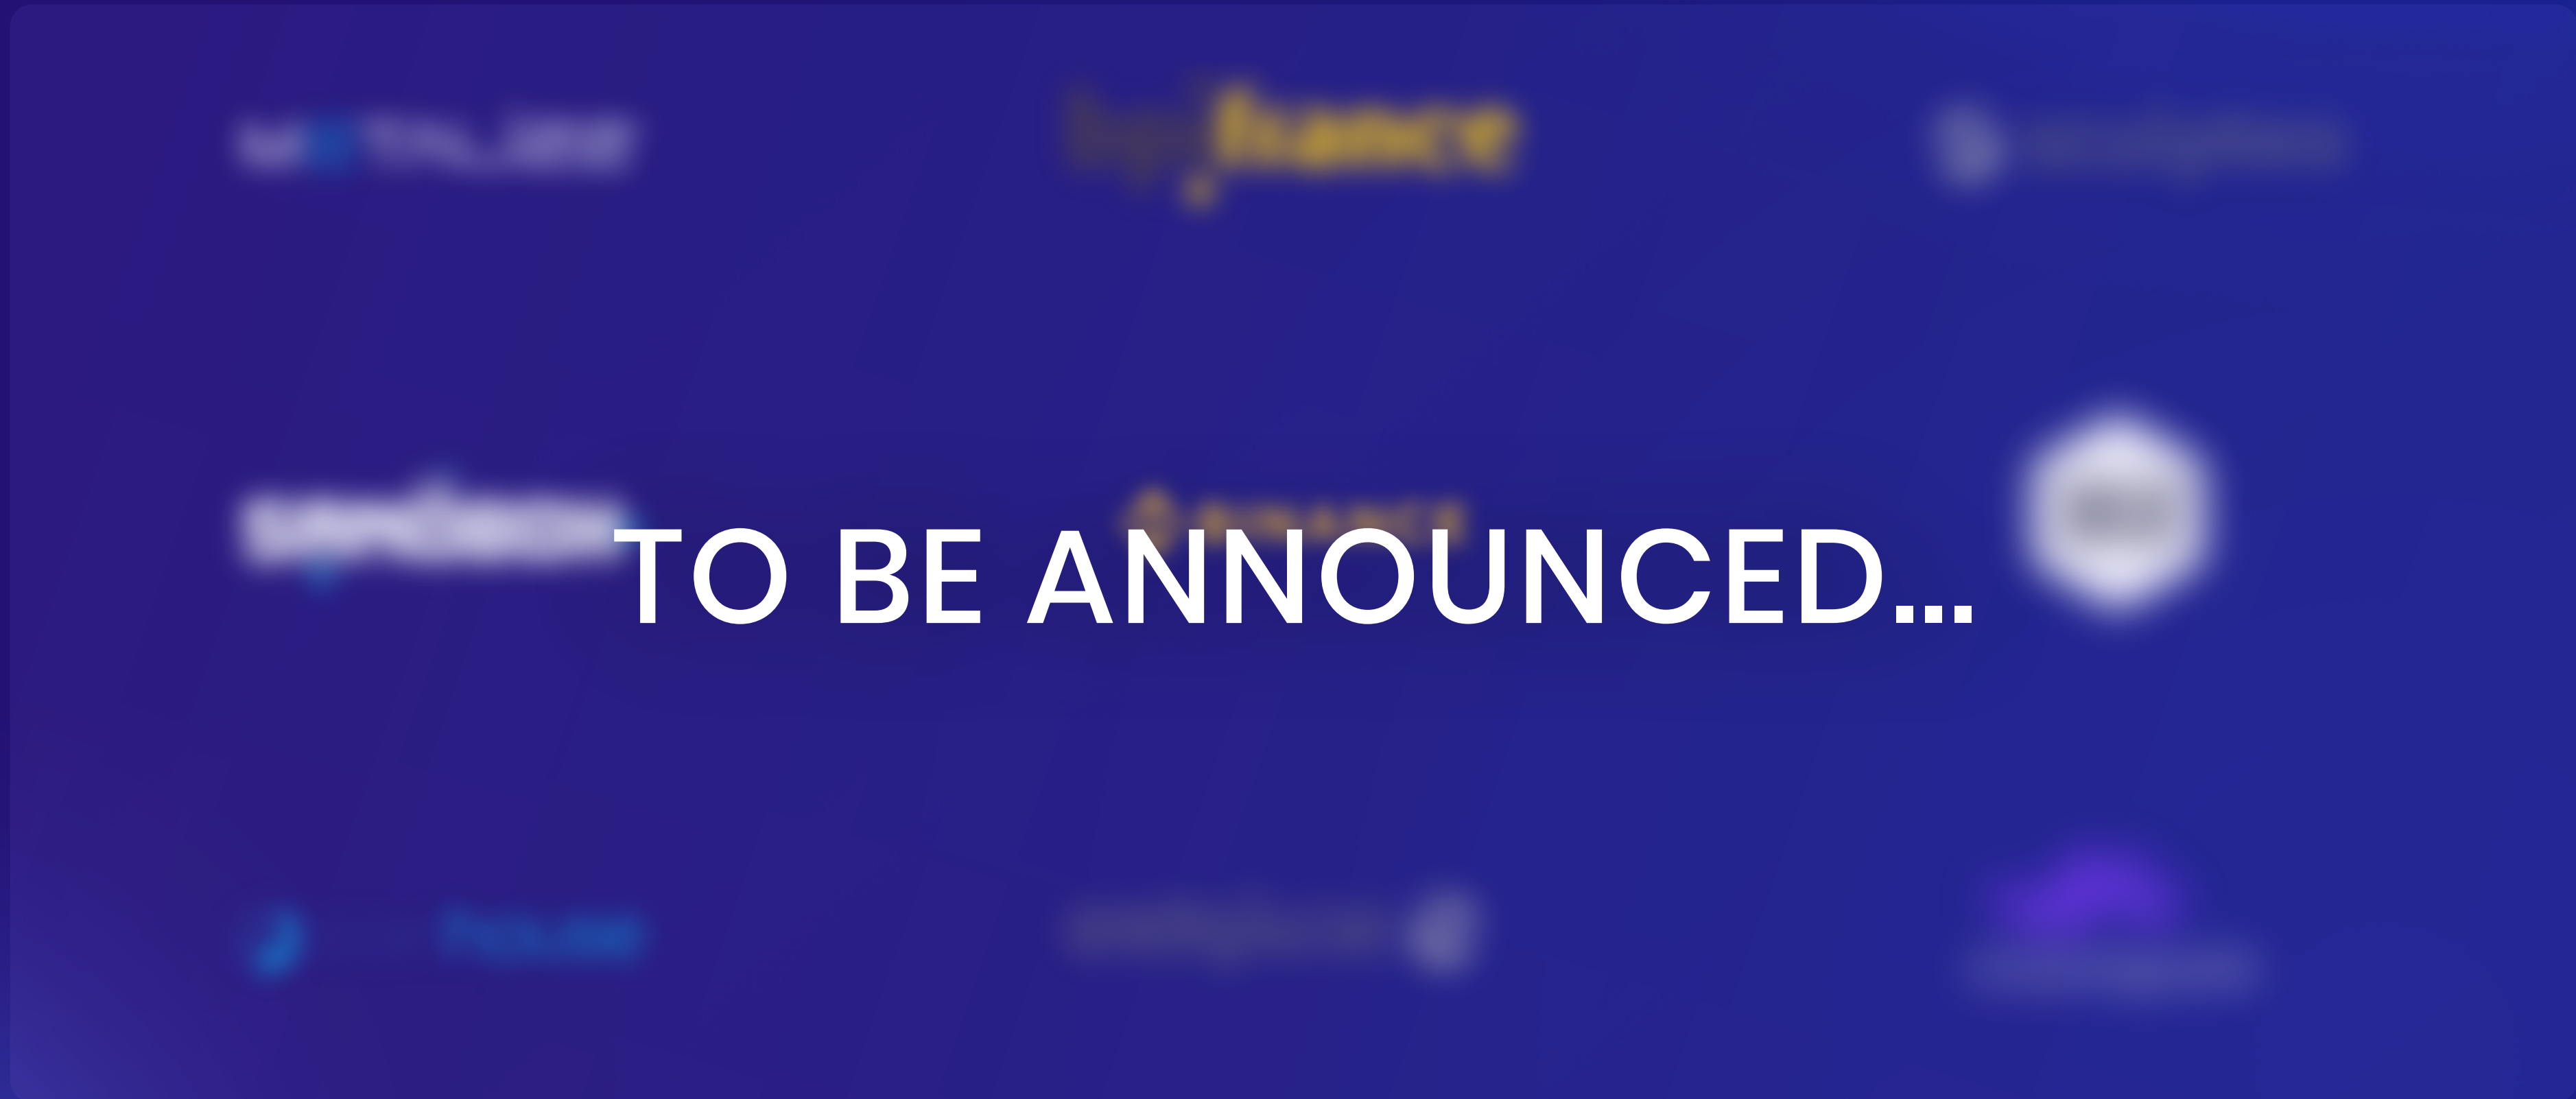

Partnership    Business Developer

With 4 years of experience in business development and marketing strategy for international companies, with large clients. Passionate and involved on web3 and NFT. Double Master Degree in Business.
